

enRAGEd Trucking 0.5.0 by LtFlash

BETA

Installation

1. Make sure you've got a working installation of RAGE Plugin Hook. You can find it here: <http://ragepluginhook.net/>
2. Copy the content of "Installation" folder into the main directory of your GTA V.
3. Make sure the enRAGEd_Trucking.dll file and its resource folder is placed in the "Plugins" folder.

How to use the mod?

1. Start GTA V using RAGE Plugin Hook.
2. Open RAGE Plugin Hook console by pressing F4 (by default) and run the following command: *LoadPlugin enRAGEd_Trucking.dll*
3. Press F8 to display the main menu of the mod.
4. Click On/Off button to activate the mod.
5. Go to the red dot which marks the location of your freight company.
6. Pick one of 3 trucks and attach one of 3 available trailers parked around the company building.
7. Press F8 again and click "Pick load".
8. Choose one from many available loads, set your loading point and destination.
9. Go to the loading point, park your trailer in the checkpoint and press LShift + U.
10. Haul the load to the destination point. You can display the notification with the load info by pressing LShift + I.
11. Reverse your trailer to the destination checkpoint and press LShift + U to unload your trailer/truck.

Repair Shops

When your truck/trailer is broken you may go to one of many repair shops. Remember that each of those shops has its own prices - you may save a lot of money by sticking to the cheaper ones!

For modders

The architecture of the mod allows anyone to add more loads, businesses which produce, accept stuff, create new repair shops etc. In the following versions I'm going to introduce an easy tool to make the process simple.

Default keys

Main menu: F8

Load/Unload: LShift + U

Cancel the current load: LShift + C

Show the info about the current load: LShift + I

Show the Repair shop menu: LShift + R

The controls can be customized by editing the Keyboard.xml file using values listed here:

[https://msdn.microsoft.com/en-us/library/system.windows.forms.keys\(VS.100,loband\).aspx](https://msdn.microsoft.com/en-us/library/system.windows.forms.keys(VS.100,loband).aspx)

Thanks go to:
